

1. Place the fixture on the top of the POST on which the fixture is to be mounted and position as desired. Using the holes located on the POST CAP, mark the hole position on the POST. Remove the fixture from the POST and drill a 1/8" diameter hole at each marked position on the POST.
2. Pull the power supply wires out from the POST and the fixture lead wires out from the POST CAP and attach the wires together by connecting BLACK to BLACK and WHITE to WHITE. Attach the POWER SUPPLY GROUND WIRE to the FIXTURE GROUND WIRE Using a wire connector rated for the size of wires being connected.
3. Place the connected wires down inside the POST and mount the POST CAP, aligning the holes in the POST CAP with the ones on the POST. Secure the POST CAP to the POST using the #10X1/2" long self-tapping SHEET METAL SCREWS provided.
4. Screw a light bulb that does not exceed the maximum wattage specified on the fixture label into the lamp socket. Place the LAMP COVER onto the top of the lamp compartment.
5. Close door and secure latch.
